

Allard UK Webinar Masterclass

Allard UK invite you to join us for our virtual Masterclass in understanding the clinical application of Dynamic Textile Orthosis in the treatment and management of hypermobility, EDS and related disorders or neurological impairment.

19 August 2021 from 13:30 - 16.30

This free Masterclass is suitable for all HCPC registered clinicians working with patients diagnosed with hypermobility, EDS and related disorders or neurological impairment.

Allard UK became aware of the need for specialised garments for people suffering with the effects of hypomobility syndrome disorders and began the research, development, and manufacturing process for HyMo. HyMo is a custom-made orthosis focussed on providing stabilisation and support of the soft tissue and joints, whilst our Elements Body range of garments is an established orthotic provision for the management of neurological impairment. In 2019 HyMo was launched in Scandinavia, after successful trials, it is now available to the whole of Europe and the UK adding to our dynamic textile orthosis range.

Learning outcomes

- Understand clinical presentations that will benefit from the use of Allard UK Dynamic Textile Orthosis.
- Increase your awareness of the current evidence available.
- Learn the differences between HyMo and EB garments and how your patients may benefit from the application of these garments.
- Have an understanding of the clinical support Allard UK will provide to you as a clinician.

Speaker

**Lydia Dean Occupational Therapist (HCPC)
Allard UK Clinical Specialist**

Lydia has over 40 years' experience as an OT and over 26 years' experience in the clinical application of Lycra garments as an adjunct to therapy intervention.
