

Wrist Lacer™ II, Short

Highly stable wrist orthosis with mouldable aluminium splints on both the dorsal and volar sides. The splints can be removed and shaped as needed. A cushion on the inside of the orthosis sleeve protects the tendons at the base of the thumb near the distal lacing. Made from durable suede-like material with a breathable lining. Locking system with a unique design that provides even compression across all four straps. Compression can be easily adjusted for patients with atypical forearm and wrist shapes. One-handed operation of the lacing system. Adjustable thumb grip.

Recommended Range Of Application

Carpal tunnel syndrome, post-traumatic, and post-operative use.

Measurements

Wrist circumference

Item No.	Model	Size	Measurement	L/R	Color
285781009	Wrist Lacer II, short	XXS	<12 cm	Left	Black
285781010	Wrist Lacer II, short	X-Small	12-14 cm	Left	Black
