KiddieGAIT®

KiddieGAIT® is an ankle-foot orthosis (AFO) for children with foot drop, unstable gait and other conditions that affect gait function. The orthosis is intended for children from approximately 2 years of age and is designed to promote a smoother, more natural gait pattern. KiddieGAIT® provides support during the swing phase and helps control foot positioning throughout the gait cycle.

The anterior position of the brace along the tibia also provides support for proximal involvement, such as knee hyperextension or crouch gait. For optimal foot positioning and control, KiddieGAIT® is designed to be used in combination with a custom-made foot orthosis or SMO.

Recommended Range Of Application

Designed to support foot drop, gait deviations secondary to proprioceptive deficit (either unstable or low-tone gait), toe-walking with no midfoot collapse, low tone crouch gait in conditions such as Spina Bifida, Cerebral Palsy, Muscular Dystrophy.

Contraindications

Lacking ROM towards dorsiflexion (need at least 5 degree dorsiflexion past neutral), Very rigid foot structure, Quadriceps spasticity, excessive postural Genu Valgum or Genu Varum, fixed/ non correctable postural Pes Valgus or Pes Varus.

Item No.	Model	Size	L/R	Footplate Length	Height
289001011	KiddieGAIT	Small	Left	16 cm	22 cm
289001012	KiddieGAIT	Medium	Left	180 mm	257 mm
289001013	KiddieGAIT	Large	Left	200 mm	295 mm
289001014	KiddieGAIT	X-Large	Left	210 mm	315 mm
289002011	KiddieGAIT	Small	Right	160 mm	220 mm
289002012	KiddieGAIT	Medium	Right	180 mm	257 mm
289002013	KiddieGAIT	Large	Right	200 mm	295 mm
289002014	KiddieGAIT	X-Large	Right	210 mm	315 mm
