Wrist Lacer™ II, Long

Highly stable long wrist orthosis with mouldable aluminium splints on both the dorsal and volar sides. The splints are removable and can be shaped as required. A cushion on the inside of the orthosis sleeve protects the tendons at the base of the thumb near the distal lacing. Made from durable suede-like material with a breathable lining. Unique locking system providing even compression across all four straps. Compression can be easily adjusted for patients with atypical forearm or wrist shapes. One-handed operation of the lacing system. Adjustable thumb support.

Recommended Range Of Application

Post-traumatic, post-operative, rheumatologic conditions, and spasticity.

Measurements

Wrist circumference.

Item No.	Model	Size	Measurement	L/R	Color
